

DATA SHEET

The RotaPrint RPA is a custom designed attachment for the Roland LEF range of printers. It is specifically designed to fit easily and effortlessly on the printer via a series of magnets that attach to the chassis of the machine. The RotaPrint does not have any motors or electrical connections and is self-powered by the LEF motion itself, ensuring perfect, banding free printing every time. The RotaPrint is dual ended meaning that you can print material up to 77mm wide and as narrow as 40 mm wide giving the end-user a diverse range of spherical products that can be easily and effortlessly printed.

Max. Print Diameter	77 mm
